

The schematic diagram illustrates the WMBUS module circuit. The module, labeled U2 RC-S2LP-868, is a yellow rectangular component with various pins. The SDN pin is connected to a 100 ohm resistor (R1) and a 10K resistor (R2) to GND. The CS pin is connected to a 10K resistor (R2) to GND. The SCK, MOSI, and MISO pins are connected to the module's internal circuitry. The VCC pin is connected to a +3V3 supply and a 0.1uF capacitor (C1) to GND. The ANT pin is connected to the module's internal circuitry. The GPIO pins are connected to the module's internal circuitry. The GND pin is connected to the module's internal circuitry.

MiBUS CONNECTOR

The diagram illustrates the MiBUS connector setup. It features two 8-pin connectors, J1 and J2, both labeled "Conn_01x08".

Connector J1 (Left):

- Pin 1: SDN (Microcontroller output)
- Pin 2: CS (Microcontroller output)
- Pin 3: SCK (Microcontroller output)
- Pin 4: MISO (Microcontroller output)
- Pin 5: MOSI (Microcontroller output)
- Pin 6: GND (Ground)
- Pin 7: +3V3 (Power supply)
- Pin 8: GND (Ground)

Connector J2 (Right):

- Pin 1: GND (Ground)
- Pin 2: GND (Ground)
- Pin 3: GND (Ground)
- Pin 4: GND (Ground)
- Pin 5: GND (Ground)
- Pin 6: GND (Ground)
- Pin 7: GND (Ground)
- Pin 8: GND (Ground)

The microcontroller is connected to J1, and the power supply is connected to J2. The ground connections are shown as triangles pointing down.
